

University of the South Pacific
o Majuro, Marshall Islands

March 2012

In October 2011 we were contacted by the University of the South Pacific – Majuro Campus to ask us to design, supply and install a grid connect solar power system. USP found us thanks to a positive reference from the College of the Marshall Islands.

We loaded a 20 foot container at our Auckland warehouse with all of the required components and sent it to Majuro. One of our solar technicians then traveled to Majuro via Hawaii to install the system with assistance from a local building company.

System Components:

- 66 x Suntech 190W Modules
- 1 x Conergy Suntop III array frame
- 6 x SMA Sunny Boy 4000US grid connect inverters
- 1 x SMA Sunny Webbox
