

Beachhaven School

- North Shore, Auckland

December 2016 – January 2017

We were contacted by Beach Haven Primary School in late October 2016 asking for a solar system to be installed “urgently” – before allocated funds were lost in January 2017.

We designed, supplied and installed this 20 kWp grid connected solar system before Christmas 2016, and completed the monitoring in January 2017.

As a gesture of good faith to the school we supplied the custom monitoring package shown below from Splash Monitoring at no charge.
