

Fulton Hogan

- Laboratory, Ellerslie Auckland

August 2015

The Lab was suffering power outages due to its main supply line not having sufficient capacity to meet the power demands at the site - as the volume of tests and experiments increased. Fulton Hogan considered replacing the supply cable, but after some investigation they instead released a tender looking for a solar / battery solution to remedy the problem.

We were successful in the tender and our system won both a SEANZ award and a Judges Commendation from the SBN in 2015.
